

FytoArbour

An ultra lightweight suspended garden with endless options.

Fytogreen's "living beam" brings an amazing WOW FACTOR, and is ideal for greening open spaces both internally or externally.

The FytoArbour module system is a self-contained hydroponic garden that can be suspended or mounted above the ground. The outstanding advantage of the system is not having plants growing up from the base of the structure as with traditional arbours and pergolas which normally takes up valuable floor space.

Utilizing the trough as continuous drainage, the requirements for drain outlets is also significantly reduced.

Key Benefits of Fytogreen's Living Beam

Ultra Lightweight

Fully Saturated weight 25kg LM
(130 x 200mm module)

Large Species Range

Over 20 cascading species to suit your desired ascetic

Cost Effective

Stunning greening without compromising on space

Suitable for Flowering Species

A great opportunity to include a 'pop' of colour

Super Lightweight Roof Garden Solution

Provides an alternative to traditional roof gardens for Klip-lok or colourbond roofs.
