

Roof Gardens

Fytogreen are committed to providing sustainable living roofs for healthy, ecologically responsible buildings. All our gardens are individually designed for low maintenance to suit site conditions, weight and set down limitations, biodiversity and sustainability.

From the new residential homes, greening a garage roof or extension – all the way to a roof sizeable commercial builds with trafficable turf and trees; Roof gardens provide a sustainability tool kit for acoustic and temperature insulation, water management, aesthetic beauty and biophilic design.

PLEASE NOTE: We do not supply the waterproof membranes, however we will direct you to the most suitable membrane system for your roof.

Extensive Roof Gardens

Thin growing medium <200mm deep (from 139 kg/m²) planted with native vegetation.

Intensive and Podium Gardens

Profile depth of 200-1500mm+ supporting substantial vegetation, shrubs and trees.

Ultra Light-Weight FytoArbour System

From only 25kg per LM with non-penetrating fixing components. Perfect for Klip-lok roofs.

Sloping Roof Gardens

Successful slope support upto 45°.
